## EXPERIENCE

### Associate Product Manager

**Zocket (GenAI marketing SaaS, B2B) · 1 year**

Feb 2026 – Present (full-time) Chennai, India

- **Founding product owner, BrandOS:** owned the **product roadmap** for an AI platform that unifies brand research, content creation and creative production in one conversational experience for enterprise marketing teams. Ran client calls, captured requirements and action items, and prioritized the **backlog** with engineering, design and ML: **initiatives shipped on schedule**.
- **Content AI engine:** agents write SEO and GEO optimised blogs, IPO articles (from 400–700 page RHP PDFs with live data) and PR pieces in **10–15 minutes instead of 40–45 (~70% faster)**. Keyword strategy and SEBI/RBI compliance checks cut AI-detection scores **from 50%+ to 20–25%**.
- **AI-native Task Management with audit log:** drop a PDF, Word or Excel file and agents read and analyse it, then create tasks with owners, priorities and due dates. A progress tracker across **6 statuses** automates timing as work moves and writes every change to an **audit log**, with upcoming SLAs, reminders and an AI-driven summary.
- **SLA-driven Approvals:** admins configure multi-level sign-off chains with SLAs; every submission auto-assigns to approvers and lands in a central **Approval List**, SLAs are tracked against the configured deadlines, and escalation stages trigger when a level runs late. AI turns reviewer feedback into change requests, moving review out of email.
- **Judge agent (AI-driven decisions):** brand guidelines are too many to check by hand, so a judge agent works behind the scenes, running **parallel checks** on logo, product, text and visual integrity against brand references. Reviewers get a compliance verdict with fix suggestions **before a human reads the creative**.
- **Product analytics:** turned user behaviour into decisions by tracking **retention**, **funnel drop-offs** and **KPIs**, segmenting users for marketing emails and analysing the overall user base, so roadmap bets follow real usage.

### Product Intern

**Zocket (GenAI marketing SaaS, B2B)**

Nov 2025 – Feb 2026 Chennai, India

- **Image and video workflows:** owned the AI Designer roadmap for flows that let marketers generate, edit and resize product visuals and ads across multiple AI providers; evaluated and optimised every flow.
- **Competitor and user research:** benchmarked competitors, ran user research and turned product gaps into roadmap bets that improved user retention.
- **Brand Moderator:** tested the agent playbook and action-history setup, verifying every action is logged and social-comment replies stay on tone.
- **AI Designer ad optimisation:** built the flow that fits ads to Meta and Google formats and publishes directly.
- **Publishing flow and module evaluation:** evaluated every module across the product and optimised the publishing flow from generated creative to published ad.

### Web Development Intern, NSIC (Government of India Enterprise)

- Built responsive web interfaces and ran UI and functional testing on a live project.

## PROJECTS & RESEARCH

### Damage Detection with YOLOv8 (AI Vehicle Assessment)

- Built a model that detects and classifies vehicle damage at 85% accuracy for faster, scalable assessments; co-authored and published the research paper in IJISRT.

### Sign Language Recognition (Machine Learning, TensorFlow)

- Trained a TensorFlow model that recognises sign gestures and converts them to text, making communication accessible for deaf and hard-of-hearing users.

### Know Spot: Chennai Hyperlocal Street News Platform

- Built an interactive Chennai map website where users click any place to see what is happening there at a glance, with live counts per area.

## SUMMARY

Founding product owner of BrandOS, an AI platform unifying brand research, content creation and creative production for enterprise marketing teams.

1 year, initiatives shipped on schedule, content turnaround cut ~70%. Strong in **product roadmap**, PRDs, **stakeholder management** and analytics. B.E. CSE (8.5 CGPA), published AI researcher.

## SKILLS

**Product Management**

Product Roadmap · PRDs · User Stories · Data-driven Prioritization (RICE, MoSCoW) · MVP Scoping · Go-to-Market · Release Management · UAT

**Strategy & Leadership**

Product Strategy · Market & Competitive Analysis · Stakeholder Management · Cross-functional Leadership · User Research · Enterprise Requirements

**Data & Analytics**

Product Analytics · Funnel & Retention Analysis · KPIs & Metrics · A/B Testing · User Segmentation · SQL · Dashboards

**AI Product**

AI Agents · LLM Products · Prompt Design · Evals · Guardrails · RAG · Knowledge Graphs · LangGraph · DeepAgents · Supervisor Agents · Context Engineering

**Tools**

Linear · Jira · Figma · Notion · Amplitude · Mixpanel · Metabase · Claude · ChatGPT · Miro · Slack · Git

## EDUCATION

**B.E. Computer Science and Engineering**

SRM Valliammai Engineering College (Anna University), 2025 · CGPA 8.5

## CERTIFICATIONS

**BCG X: GenAI**

BCG

**Foundations of Data Analytics**

Google

**Front-End Web Development**

Infosys

**Web Development Fundamentals**
